

Honey Trapping

During the Cyber Safety Life Skills Class, we learnt about *Cyber Grooming* and *Honey Trapping*.

Cyber Grooming is the grooming of children by online predators. Every year, 300 million children are victimized by predators online. They are made to share pictures, videos or engage in sexual acts by these predators. This is one of the biggest reasons for human trafficking and eight million children go missing each year.

Honey Trapping, as the term suggests, means winning the trust of a person online by using compliments and sweet gestures to trap them. Once the person is trapped, he or she is required to reveal information or do inappropriate things.

You must be careful of online predators. Never share your bank details, personal information, pictures and videos with people online.
